

Welcome to the world of the finest multi-station gyms ever built; the world of Vectra Fitness.

Before embarking on an exercise program, it is recommended that you undergo a complete physical. Discuss with your physician a personalized exercise program taking into account your age, weight and physical condition. For safety, perform exercises exactly as shown and described here and with attachments as shown. A qualified trainer can suggest other exercises and programs to help you accomplish your fitness goals. However, only depart from the exercises shown here under the guidance of a qualified individual.

To enhance the benefits and enjoyment you receive from using Vectra equipment, please consider the following suggestions:

- Warm up and stretch before exercising.
- While exercising, never hold your breath. Exhale upon exertion.
- Always use proper form. Do not sacrifice good form in an attempt to lift more weight.
- Use controlled speed of movement when performing exercises. Avoid jerky movements.
- Always use a full range of motion. Never lock out elbows or knees.
- Train at least 3 days a week. Do not train the same body part two days consecutively.
- Choose a weight you can handle for ten or more repetitions. As you become stronger, adjust the weight so that you cannot complete more than the prescribed number of repetitions.

For additional or specific information on workout programs, we suggest you consider the following options: 1) consult a certified fitness instructor or certified personal trainer (A.C.E., N.S.C.A. and the A.C.S.M. are all reputable certification programs); 2) consult your specialty fitness retailer; 3) consult a physical therapist; or 4) read reference materials suggested by any of the previously mentioned sources.

1. Decline Press
Benefits: Lower pectorals, deltoids, triceps.
Position: Position bench (set at 15° decline) such that grips are in line with lower chest. Lie on the bench with bar at chest level and feet placed behind the pads. Grasp bar, palms forward.
Action: Push bar to full extension (just short of locking out the elbows), return.
Tips: Point the elbows away from the body to help isolate the pectorals. Avoid arching back.

2. Bench Press
Benefits: Pectorals, anterior deltoids, triceps.
Position: Lie on bench, feet flat on floor (feet may be placed on bench to help prevent lower back strain). Grasp bar, palms forward, at chest level.
Action: Push bar to full extension (just short of locking out the elbows), return.
Tips: Don't raise head, back or buttocks off bench.

3. Incline Press
Benefits: Upper pectorals, deltoids, triceps.
Position: Adjust bench to either 15°, 30°, 45° or 60° position. Lie on bench with bar above chest level. Don't start too low. Feet flat on floor. Grasp bar, palms forward.
Action: Push bar to full extension (just short of locking out the elbows), return.
Tips: Don't raise head or buttocks off bench.

4. Dips
Benefits: Lower pectorals, deltoids, triceps.
Position: On bench press arm, place hands shoulder width apart, support body weight on extended arms.
Action: Lower body until upper arms are parallel to floor, return.
Tips: Keep head up and body vertical.

5. Butterfly
Benefits: Pectorals.
Position: Sit upright with feet on floor, upper arms in line with shoulders and parallel to floor. Keep head back. Place hands on pads.
Action: Bring pads together in front of body, return.
Tips: Keep forearms vertical on pads, lead with elbows. Keep palms relaxed.

6. Seated Low Row
Benefits: Lower lats, biceps and rear delts.
Position: Use extension cable. Grasp short bar, palms down. Sit with back straight and legs slightly bent.
Action: Pull bar to abdomen, return.
Tips: Maintain erect posture. Keep elbows in.

7. Chest Supported Row
Benefits: (Wide grip) upper lats, shoulder, mid-back, biceps. (Narrow grip) mid-lats, biceps.
Position: Adjust chest support cushion to appropriate position. Assume the position shown in the illustration.
Action: Reach out and grab the handles at the desired position. Pull bar slowly toward chest, return.
Tips: At the top of the movement, pull elbows back and squeeze shoulder blades together.

8. Lat Pull
Benefits: Lats, musculature of scapular region, biceps.
Position: Grasp lat bar, palms forward. Lean back slightly.
Action: Pull bar to below chin, return.
Tips: Keep shoulders back and abdominals contracted.

9. Triceps Extension
Benefits: Triceps.
Position: Sit with back against pad. Reach back and grab strap.
Action: While keeping elbows pointed forward and upper arms stationary, extend arms directly overhead. Return.
Tips: Keep elbows in a fixed position.

10. Triceps Press Down
Benefits: Triceps, especially the outer head.
Position: Stand erect, feet shoulder width apart, knees slightly bent.
Action: Grasp short bar at chest level, palms forward.
Action: Push down on bar to full extension, return.
Tips: Keep elbows close to body, move only forearms to complete the movement.

11. Biceps Curl
Benefits: Biceps.
Position: Use extension cable. Stand erect, grasp short bar palms up, arms fully extended.
Action: Curl the bar until it reaches just below shoulders, return. For variation, try narrow and wide grip. Also, a reverse grip will train the extensors of the forearm. To isolate the biceps, use the single handle.
Tips: Keep elbows close to body and upper body stationary. Keep knees slightly bent, hips tucked under. Do not arch back.

12. Shoulder Press
Benefits: Deltoids, trapezius, triceps.
Position: Adjust bench to upright position. Grasp bar with palms forward, handles approximately aligned with ears.
Action: Push bar directly overhead to full extension, return.
Tips: Don't arch back. Keep feet flat on the floor.

13. Shoulder Shrugs
Benefits: Trapezius.
Position: Stand erect, grasp bench press handles, palms rearward.
Action: Elevate shoulders as high as possible, pause, return.
Tips: Keep arms extended and body rigid, knees slightly bent. Try to touch shoulders to ears.

14. Side Lateral
Benefits: Medial and anterior deltoid, trapezius.
Position: Use extension cable. Standing upright, grasp single handle with arm bent slightly at elbow.
Action: Pull handle up in an arc until arm is almost parallel with floor, return. Perform repetitions and switch arm.
Tips: Raise and lower slowly for better isolation.

15. Bent Over Lateral
Benefits: Rear deltoids, musculature of scapular region.
Position: Use extension cable. Grasp single handle with hand. Stand perpendicular to pulley, bending well forward at hips.
Action: Pull handle across chest in an arc until arm is almost parallel with floor, return.
Tips: Keep back straight and lower body rigid, knees slightly flexed.

16. Squat
Benefits: Quadriceps, gluteals, hamstrings.
Position: Secure squat attachments and adjust starting height. Position shoulders and hips directly under pads, feet slightly forward, thighs parallel to floor.
Action: Slowly raise bar up to full standing position, return.
Tips: Keep back straight and head up. Use only leg action to complete movement.

SQUAT ATTACHMENTS:

A: Align pin with hole B: Insert pin C: Twist and lock

17. Leg Extension
Benefits: Quadriceps.
Position: Adjust seat back to appropriate position, sit upright, point toes slightly.
Action: Raise weight until legs are parallel to floor, return.
Tips: Pause at full extension. Lower slowly.

18. Leg Curl
Benefits: Hamstrings.
Position: To adjust seat to upright position, simply pull release mechanism under the seat and lift to vertical locked position. Straddle leg pivot, thighs against cushion with back of legs against pads. Grasp handles or lean forward and grasp backrest.
Action: Raise leg, return. Perform repetitions, switch leg.
Tips: Keep thigh and pelvis in contact with cushion. Do not arch back.

19. Inner Thigh Pull
Benefits: Inner thighs (adductors).
Position: Secure ankle strap to right leg. Stand erect with right leg out to side.
Action: Pull right leg across left leg, return. Perform repetitions, switch leg.
Tips: Keep leg straight. Do not swing leg.

20. Outer Thigh Pull
Benefits: Hip (abductors), obliques.
Position: Secure ankle strap to left leg. Stand erect with left foot in front of right. Grasp the machine for support.
Action: Raise leg to 45°. Perform repetitions, switch leg.
Tips: Keep leg straight. Do not swing leg.

21. Kick Back
Benefits: Gluteals, rear obliques.
Position: Secure ankle strap. Stand erect with feet together. Grasp machine for support.
Action: Raise leg to 30°, return. Perform repetitions, switch leg.
Tips: Keep back and leg as straight as possible. Do not swing leg. Don't arch back.

22. Standing Calf
Benefits: Calf group.
Position: Secure squat attachments. Adjust starting height to stand erect with pads resting on shoulders. Place feet 12" apart with balls of feet on edge of calf block, heels nearly touching floor.
Action: Rise up on balls of feet as far as possible, pause, return.
Tips: Keep shoulders, hips and knees in a straight line. Point toes in or out for different training effect. Avoid bouncing.

23. Ab Crunch
Benefits: Abdominals.
Position: Adjust seat back all the way back. Sit against backrest. Grasp strap, pull strap snug against base of neck.
Action: Crunch forward and down until small of back almost leaves contact with backrest, return.
Tips: Tuck chin to chest and concentrate on using abdominal muscles only.

24. Twisting Oblique
Benefits: External obliques, intercostals.
Position: Adjust seat back all the way back. Sit against backrest. Grasp strap, pull strap snug against base of neck.
Action: Crunch forward while at the same time trying to touch your elbow to the opposite knee. Return. Repeat, going opposite direction.
Tips: Keep lower back in contact with seat back pad to reduce back strain.

25. Abdominal Reverse Curl
Benefits: Abdominals.
Position: Lie on bench and grasp cushion behind head. Bend knees and place feet on bench. Keep feet and knees together.
Action: Using abdominals, curl knees toward chest and hold. Return slowly to starting position.
Tips: Avoid using hands and upper body. Only slightly lift hips off the bench. Concentrate on the abdominals.

PRIMARY MUSCLE GROUP WORKED	
CHEST	1, 2, 3, 4, 5
BACK	6, 7, 8
ARMS	9, 10, 11
SHOULDERS	12, 13, 14, 15
LEGS	16, 17, 18, 19, 20, 21, 22
ABDOMINALS	23, 24, 25

WARNING

Serious injury can occur if you are struck by falling weights or moving parts. The risk that you assume by using this type of equipment can be reduced by obeying a few simple rules:

1. **IMPORTANT:** Cables are a wear item. It is your responsibility to prevent unexpected breakage. To do this, inspect every cable daily. Pay particular attention to areas near fittings at each end of each cable. Access panels are provided, where necessary, for this purpose. Replace worn, frayed, or damaged cables immediately. The actual wire strands, the fittings, and the nylon jacket itself must all be scrutinized. Using or allowing a machine to be used with a suspect cable can result in serious injury.
2. Inspect the nylon jacket of each cable carefully, again paying particular attention to the cable ends. This nylon jacket is essential for cable life and safety. Any cable should be replaced if the nylon jacket is missing, is damaged in any way, has pulled or shrunk away from the fittings at the end of the cable, or is discolored. **DISCOLORATION, DARKENING OR BULGING OF THE JACKET IS AN EARLY INDICATION OF INTERNAL PROBLEMS SUCH AS WEAR OR FRAYING.**
3. Read and follow all instructions in your owner's manual, on your exercise chart, and on product warning label. Additional copies are available from Vectra Fitness, Inc. or your dealer. Do not use this machine until you have taken the time to become completely familiar with its safe operation.
4. Consult your physician before beginning your exercise program.
5. Do not allow young children to use or play with or around this machine. Allow older children to use the machine only with adult supervision.
6. Keep body, hair, and clothing clear of weights and moving parts at all times. Keep fingers clear of moving parts while making adjustments.
7. Inspect the gym for loose or worn parts, damaged, frayed, or worn cables, broken weight plates, etc. Do not use or allow the machine to be used until any defective parts are repaired or replaced. Refer to the "Routine Inspection and Maintenance" section of your manual for specific inspection rules. Use only Vectra authorized replacement parts.
8. Ensure that the weight selector pin is in good working condition and fully engaged in the selector shaft prior to lifting. Use only the Vectra supplied pin or a Vectra authorized replacement.
9. Ensure that any locking mechanisms are properly engaged prior to lifting. Locking mechanisms secure the following in position during use: seat pads, accessory items such as squat attachments and lat hold downs, cable attachments, press arms, leg developers, etc. An improperly engaged locking mechanism could result in an injury.
10. Obtain assistance to free jammed weight plates, pulleys, etc. Do not attempt to free jammed weight plates by yourself. Falling weight plates can cause serious injury. Do not pin the weight stack or top plate in an elevated position and do not use machine if found in this condition.
11. Do not drop the weight plates. Lift only as much as you can control safely. Never use dumbbells or other means to incrementally increase the weight resistance. Use only those means provided by Vectra. Don't be careless, stay alert.
12. Serious injury could result if equipment moves while in use. To prevent this, ensure that the floor is even, strong, and not too slippery. If equipment slides too easily on floor, place equipment on rubber matting. Errors in lifting form could also result in bench moving in use. To prevent this, lift weight vertically only and do not push horizontally with your feet while lifting. Replace any warning or caution labels on product if damaged, illegible, or removed.
